

For Maven Dependencies and Indices

If you are having trouble with Maven not downloading project dependencies, sources, or Javadoc, follow these steps:

- Navigate to the top bar menu and select Window > Preferences.
- In the Preferences window, expand the Maven section.
- Tick the following options:
 - ✓ Download artifact sources
 - ✓ Download artifact Javadoc
 - ✓ Optionally, you can also tick Download repository index updates on startup to keep your dependency search index current.
- Click Apply & Close.
- Restart Eclipse for the changes to take full effect.
- After restarting, you might need to right-click your project and select Maven > Update Project to force a refresh of dependencies.
